**Re: Inspection required - Setco Australia Flameproof Display Enclosure (AUS Ex 2509X)**

Dear Sir/ Ma'am;

Setco Australia would like to provide information surrounding fastener reports, with respect to our DE-01 monitor enclosure.

This particular enclosure is no longer manufactured as the AUS Ex certification has expired. There are approximately 100 units still in operation and you have been isolated on our database as an owner of at least one of these enclosures. The common application is as a reversing camera monitor housing in the cabins of diesel and electrical powered vehicles.

As per the certification drawing, there are fourteen M6 retaining bolts holding the lid to the body. The drawing specifies that these bolts are socket head button type, constructed using 304 Stainless steel with a nominated Grade of 4.6. Please refer to the certification drawing 150304 for full details.

Enclosure Example

There have been some reports of enclosures with incorrectly graded bolts (12.9 Grade Zinc-plated).

Incorrect Graded Fastener

Correct Graded Fastener

Please inspect your enclosures to verify that the correct grade items are in use. Should your enclosure not be in compliance, M6 grade 4.6 fasteners are available by ordering Setco part number: 150327.

Setco Sales representative are available on 02 49645900 or email: [sales@setco.com.au](mailto:sales@setco.com.au)

Best Regards,

Engineering Manager  
SETCO Australia Pty. Ltd.
